

WEBSITE REVIEW

Abilash — Personal Website

Comprehensive Code, UX, Performance & Security Review

Generated: July 2026

1. Architecture & Structure

- Tech: Vite 5 + React 18 + Tailwind v4 + Framer Motion + Leaflet + Express
- Clean file structure: pages/ (4), components/ (2), services/ (4), layouts/ (1)
- Server.js handles API proxy for tracking, travel data, and OSRM routing

WARN Inconsistent component names — TravelLog.jsx exports "Space()", Blogs.jsx exports "Writing()"
Inconsistent component names — TravelLog.jsx exports "Space()", Blogs.jsx exports "Writing()"

WARN No React.lazy or code splitting — all pages eagerly imported in App.jsx

INFO Unused dependencies: jspdf (4.2.1) and serve (14.2.4) still in package.json

2. Bugs & Errors

BUG Broken Chess.com link in Home.jsx:133 — href contains "https://https://https://www.chess.com" (triple protocol)
Broken Chess.com link in Home.jsx:133 — href contains "https://https://https://www.chess.com" (triple protocol)

BUG Duplicate mailto: in Profile.jsx:17 — href="mailto:mailtoabilashy@gmail.com" (should be "mailto:abilashy@gmail.com")
Duplicate mailto: in Profile.jsx:17 — href="mailto:mailtoabilashy@gmail.com" (should be "mailto:abilashy@gmail.com")

BUG Portfolio URL mismatch — Shell.jsx:69 links to abilash-dev.onrender.com, Shell.jsx:158 and Home.jsx:97 link to abilash-profile.onrender.com
Portfolio URL mismatch — Shell.jsx:69 links to abilash-dev.onrender.com, Shell.jsx:158 and Home.jsx:97 link to abilash-profile.onrender.com

BUG Favicon broken in production — index.html points to /src/images/logos.png which doesn't exist after vite build. Move to public/
Favicon broken in production — index.html points to /src/images/logos.png which doesn't exist after vite build.
Move to public/

BUG Favicon type attribute empty — type="" should be type="image/png"

WARN "Experiance" typo in Blogs.jsx — should be "Experience". Affects filter, tag colors, and sheet data
"Experiance" typo in Blogs.jsx — should be "Experience". Affects filter, tag colors, and sheet data

WARN Session timeout is only 60 seconds — visitors get kicked out after 1 min of inactivity. Standard is 5-15 min
Session timeout is only 60 seconds — visitors get kicked out after 1 min of inactivity. Standard is 5-15 min

WARN Blog modal z-index is only 80 — can render below map legend (z-1000) if opened on Travel Log page
Blog modal z-index is only 80 — can render below map legend (z-1000) if opened on Travel Log page

3. Security

BUG GAS URL hardcoded in server.js — use process.env.GAS_URL instead

BUG No rate limiting on /api/track — anyone can spam with automated POSTs

BUG console.log in production server.js — leaks visitor IPs, device info, tracking payloads to Render logs
console.log in production server.js — leaks visitor IPs, device info, tracking payloads to Render logs

WARN No input sanitization on /api/track — server blindly forwards req.body keys as URL params to Google Sheets
No input sanitization on /api/track — server blindly forwards req.body keys as URL params to Google Sheets

WARN No security headers — missing helmet middleware (X-Content-Type-Options, CSP, X-Frame-Options)
No security headers — missing helmet middleware (X-Content-Type-Options, CSP, X-Frame-Options)

WARN UA-based brand detection unreliable — many browsers spoof navigator.userAgent. Consider Client Hints API
UA-based brand detection unreliable — many browsers spoof navigator.userAgent. Consider Client Hints API

OK No secrets in frontend code. API keys handled server-side.

4. Performance

PERF No lazy loading for images — add loading="lazy" to non-critical images

PERF Inconsistent image formats — mix of .webp and .jpg. Convert all to WebP for consistent compression
Inconsistent image formats — mix of .webp and .jpg. Convert all to WebP for consistent compression

PERF Cedarville Cursive font loaded but never used — remove import to save ~100KB

PERF Framer Motion is ~45KB gzipped — consider lighter alternatives for simple fade/slide animations
Framer Motion is ~45KB gzipped — consider lighter alternatives for simple fade/slide animations

PERF Leaflet (~40KB gzipped) only used on Travel Log — lazy load it

PERF No responsive images — profile image loads at full resolution. Use srcset or image CDN

PERF Route cache recomputed on every visit even if sheet data unchanged

5. SEO & Meta Tags

BUG No meta description — Google shows blank snippet in search results

BUG No Open Graph tags (og:title, og:description, og:image) — no preview when shared on social media
No Open Graph tags (og:title, og:description, og:image) — no preview when shared on social media

BUG No Twitter Card tags — no preview when shared on Twitter/X

BUG No robots.txt or sitemap.xml — search engines cannot crawl efficiently

BUG No structured data (JSON-LD Person schema) — missing Google Knowledge Panel opportunity

WARN Title is just "Abilash" — should include keywords like "Developer, Traveler & Explorer"

6. Accessibility

BUG user-select: none on entire site (index.css:44) — hostile to screen readers and keyboard dictation users
user-select: none on entire site (index.css:44) — hostile to screen readers and keyboard dictation users

BUG cursor: none on blog content (index.css:251) — mobile users see nothing, touchpad users lose feedback
cursor: none on blog content (index.css:251) — mobile users see nothing, touchpad users lose feedback

WARN Missing descriptive alt text — profile images just say "Abilash" instead of describing the image
Missing descriptive alt text — profile images just say "Abilash" instead of describing the image

WARN No skip-to-content link — keyboard users must tab through entire header to reach page content
No skip-to-content link — keyboard users must tab through entire header to reach page content

WARN No focus management — blog modal doesn't trap focus, doesn't return focus on close

WARN TimeoutModal at z-9999 with no dismiss option besides "Try Again" — user gets stuck if API is down
TimeoutModal at z-9999 with no dismiss option besides "Try Again" — user gets stuck if API is down

7. UX Issues

WARN 60-second timeout is too aggressive — visitors reading blogs get logged out. Use 5-10 minutes.
60-second timeout is too aggressive — visitors reading blogs get logged out. Use 5-10 minutes.

WARN Download requires name entry — creates friction, many visitors will abandon

WARN "Say Hello" opens greeting animation, not a contact form — visitors expecting to reach you will be confused
"Say Hello" opens greeting animation, not a contact form — visitors expecting to reach you will be confused

INFO No 404 page — invalid URLs show home page via SPA fallback

INFO No back-to-top button on long pages (Travel Log place grid)

INFO No reading progress indicator for blog posts

INFO Greeting animation uses random positions — may look different on each render (non-deterministic)
Greeting animation uses random positions — may look different on each render (non-deterministic)

8. Code Quality

INFO Mixed coding styles — pages use modern hooks/destructuring, services use var and function expressions
Mixed coding styles — pages use modern hooks/destructuring, services use var and function expressions

INFO @types/react in devDependencies but no TypeScript files — either use TS or remove types

INFO ESLint configured in package.json but no .eslintrc config file — lint command would fail

INFO No error boundaries — if any page crashes, entire app goes blank

INFO Blog cursor effect uses vanilla DOM manipulation — bypasses React rendering model

INFO Hardcoded values throughout — timeout, batch sizes, cache keys, animation durations should be in a config
Hardcoded values throughout — timeout, batch sizes, cache keys, animation durations should be in a config

9. Server-Side Issues

BUG console.log in production — leaks visitor IPs, device info, tracking payloads to Render logs
console.log in production — leaks visitor IPs, device info, tracking payloads to Render logs

BUG No security headers — no helmet middleware

WARN IP lookup blocks every tracking request — even with 3s timeout, adds latency to every pageview
IP lookup blocks every tracking request — even with 3s timeout, adds latency to every pageview

WARN No /health endpoint — Render expects a lightweight health check route

WARN res.json({ok:true}) sent AFTER GAS call — if GAS takes 3s, client blocks for 3s on tracking
res.json({ok:true}) sent AFTER GAS call — if GAS takes 3s, client blocks for 3s on tracking

INFO No request body size limit explicitly configured — relies on express.json() default of 100KB
No request body size limit explicitly configured — relies on express.json() default of 100KB

10. Z-Index Audit

- Leaflet map: 0 (OK)
- Map toggles: z-100 (OK)
- Blog modal: z-80 — TOO LOW, can render below map elements
- Header: z-2000 (OK)
- Mobile nav: z-2400/2450 (OK)
- Greeting overlay: z-2500 (OK)
- Profile lightbox: z-3000 (OK)
- DownloadModal: z-9999 (HIGH but functional)
- TimeoutModal: z-9999 (HIGH but functional)
- Blog cursor: z-99999 — EXTREME, should be z-9999 to match modals

11. Priority Fixes (Quick Wins)

- #1 — Fix Chess.com triple URL (1 min)
- #2 — Fix duplicate mailto: (1 min)
- #3 — Fix favicon type & move to public/ (2 min)
- #4 — Add meta description + OG tags (10 min)
- #5 — Remove console.log from server (1 min)
- #6 — Fix "Experiance" typo (2 min)
- #7 — Increase timeout to 5 min (1 min)
- #8 — Remove jspdf + serve from dependencies (2 min)
- #9 — Remove unused Cedarville Cursive font (2 min)
- #10 — Standardize z-index values across modals (15 min)

12. What's Working Well

- Dark theme is cohesive — accent blue (#3b82f6), white, black used consistently
- Mobile nav — slide-in panel with numbered items, smooth animation, proper z-indexing
- Map implementation — Dark Matter tiles, OSRM routing, localStorage caching, parallel batch fetching, progress bar
- Profile image lightbox — smooth scale animation, backdrop blur, proper layering
- Travel Log card grid — emoji + city + country/date layout is clean
- Explore cards — numbered 01/02/03 layout with icon box and arrow slide-in
- Greeting overlay — wave hand animation and floating particles add personality
- Tag-based blog filtering with color coding works well
- Server-side IP geo-enrichment is a smart tracking feature
- SVG stroke-dashoffset route draw animation is a premium map touch

13. Feature Suggestions

- Dark/Light mode toggle — theme is dark-only, a toggle would serve more visitors
- Blog CMS integration — currently hardcoded, consider Sanity/Contentful/MDX
- Visitor analytics dashboard — collect data but no way to view it
- Travel timeline view — vertical timeline with photos for each destination
- Reading progress bar for blog posts
- Page view counter on home page as social proof
- Contact form — replace greeting card with Formspree/EmailJS integration
- Spotify/ music widget — "Music Addict" trait with no music integration
